

Examples of E-Commerce Web Sites

PLEASE READ

Here is a group of suggested templates that may be modified as far as colors, fonts, images, logo's etc. The idea is for you to choose the template that most approximates the design that you feel that you like as far as placement of the main menu and the general over all look and feel of the site. Remember we can modify the template to suit your needs. What we are doing is trying to use an existing template as a starting point for your site so save you money and time in site development. If however, you don't see anything you like we can create one from scratch.

These example screen shots are of the Home page just to give you a general idea of what the site would look like. Each site will include Product Category pages, Product Detail pages, View Cart page, About Us page, Search page, Contact Us page, Site page and an Affiliate page if you desire that option. Of course all the shopping cart pages are included for checkout and customer review of the order. Remember this is just a starting point, we can modify the template.

-

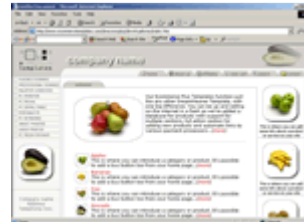

The e-commerce software we use is provided by E-Commerce Templates. Overall, we believe that this solution provides extensive functionality. The software is under continual development by the original developers. There are also many third-party developers who have extended the software to provide additional functionality that is integrated with the original framework. The cost of the Template is included in the development price.

As an e-commerce website owner, you may not want to know some of the technical aspects of the website design. That's fine. However, you will need to be able to administer the website/shop after the website is live and it's important that you or someone in your organization is comfortable with this. Most e-commerce websites will come with an administration control panel that enables you to manage the website and the customer's orders. E-Commerce Templates Administration has a comprehensive control panel that allows you to easily modify your web sites many features. We supply you with a PDF Administration manual for your web site.
